

Convergent Approach for Cardiac Ablation

Fill out the attached card for
the patient.

TEAR HERE FOR PATIENT CARD

Following is information for your post-procedure care.

Occasionally, patients may notice the following symptoms associated with a minimally invasive surgical ablation in the first few months after the procedure. These symptoms most often occur 2 – 3 weeks post-procedure:

- Shortness of breath that may be worse when you lay down
- Chest fullness or pressure
- Nausea
- Abdominal fullness
- Difficulty swallowing

If you were to experience these symptoms, please contact your Convergent physician team or seek medical attention at the nearest hospital.
